Constructor

Dear Hiring Team,

I co-founded WallOfTraders.com and ran product on it for seven years: a crypto trading platform where I owned the roadmap, decided what shipped, wrote the specifications, and checked every feature against how traders actually used it. An active community on Telegram would tell us within hours when a change added friction, so the loop between shipping something and learning whether it worked stayed short.

Alongside that I spent ten years between L'Oréal's HR business teams and the developers building for them, across forty countries running on one platform. My job was to make integrations land: work out what the business needed, write the specification, arbitrate what got built, then stay with the release through go-live and the support queue that followed. Time-to-value gets decided long before go-live, in how clearly the setup path is written down and in how much of the diagnosis a customer can do before opening a ticket. On OneProfile I owned that path across forty countries; on OnePayroll I ran the data migration into production.

Where I would be starting fresh is the developer-facing surface. My product work has been on applications people use directly, so SDKs, tracking instrumentation and attribution are territory I would be learning: browser constraints, event validation, the mechanics of shipping a breaking change. What I bring to it is the other side of that same problem, having spent years accountable for what happened when the data arriving in a system was wrong.

The engineering side of me is still active. I hold a Master's in Applied Mathematics, I write Python, and I trained in machine learning before applying it to a scraping and prediction project of my own. I have also run SEO and paid acquisition, which is where I got used to arguing with my own numbers when the data was thin. Translating between engineers and the customer-facing teams is what I did for a decade, and I would happily do it again.

I'd genuinely enjoy a conversation about the role.

Kind regards,

Gaëtan FRANÇOIS
