

Dear Hiring Team, I spent ten years managing L'Oréal's SAP platform across 40+ countries. That meant sitting in rooms with senior HR and finance stakeholders, translating system complexity into business decisions, and keeping a very large ship moving, often across time zones, legal frameworks, and competing priorities. When I came across the CSM role at Taulia, the overlap was hard to ignore. What drew me in specifically was the supply chain finance angle. At L'Oréal, I led the global payroll centralisation programme (OnePayroll), which put me right at the intersection of financial operations, cross-functional coordination and data migration across markets. Before that, I worked across a broad portfolio of large enterprise accounts: Air France, Generali, Sanofi, Canal+, Degremont, FMC Technologies ; managing SAP deployments and support across industries where operational continuity is non-negotiable. I'm not coming in claiming deep working capital expertise, but I understand the operational and financial infrastructure these programmes sit inside, and I know how to make enterprise clients actually use what they've paid for. The customer success piece is what I've been doing, with different labels, for 15 years. At L'Oréal, I ran quarterly business reviews with senior executives, managed escalations in production environments, and acted as the link between what the client needed and what the product team could deliver. At WallOfTraders.com, the startup I co-founded, I built the customer success function from scratch ; different scale, same logic. Something clients have consistently told me: I'm easy to reach, quick to act, and I make them feel like their problem is my problem. I don't let things sit. Whether it's an escalation at 5pm or a question that could wait but shouldn't, I'm the person who picks up. That kind of proximity is something I take seriously ; it's not just service, it's trust. I'm French, based near Anglet, available from 10 August 2026 for a remote setup. My English is fluent, I have basic Spanish and Portuguese, and I use generative AI tools daily ; which I mention not as a buzzword but because at Taulia, where proprietary analytics are central to the CSM role, being comfortable with data is table stakes. I'd genuinely enjoy a conversation about the role. Gaëtan François
